

AEOS

AUTONOMOUS ENTERPRISE OPERATING SYSTEM

**Verified cross-chain evidence.
Cited AI decisions.
DAO-controlled outcomes.**

BUIDL CTC 2026 FALL · AI × DEFI × GOVERNANCE

[LIVE TESTNET EVIDENCE](#)

AI advises. The DAO authorizes. Assets never belong to the model.

DAO treasury AI has two unacceptable failure modes

Unverified inputs create confident hallucinations. Autonomous execution creates unbounded authority.

01

Untrusted data

A transaction hash is not economic truth. Stale or incomplete data must stop the recommendation.

02

Unbounded agency

A model must not hold keys, sign, broadcast, or obtain treasury execution authority.

AEOS separates evidence, advice and authority into independently verifiable layers.

Attestcoin makes source-chain inclusion independently verifiable

anti-forgery proof · continuity freshness · replay-safe lineage · tenant isolation

NO BRIDGE CUSTODY

NO ORACLE OPERATOR

NO AI SIGNER

The demo is anchored in canonical testnet transactions

One project-owned source sample completed the full 11-step proof-to-anchor route.

			ZERO NATIVE VALUE

Evidence expands reasoning without inventing a trade

New facts change what each role may claim; they do not force a theatrical position change.

TRANSFER ONLY

Verified inflow

HOLD

Current state unknown

+ BALANCE

20 USDC at one block

HOLD

Freshness window expired

+ MARKET STATE

Price · liquidity · authority

CONDITIONAL

Next proof-backed contrast

8/8 roles cite the new balance Evidence · exact RAG bundle inherited · Risk and Compliance still challenge

A cited Decision can trigger governance—but never bypass it

LIVE ATTEMPT 3

1,000,000 FOR · 40,000 QUORUM · 60s TIMELOCK · `PauseChanged(true)`

Outcome: deterministic withholding. Zero asset movement. No PolicyRegistry mutation.

`assetExecutionAuthorized = false`

Three live facts support one auditable story

Every fact remains narrow; duplicates and failed attempts stay visible.

PROOF-TO-ANCHOR	Source inclusion → Evidence → Decision → ASC	COMPLETE
USDC INFLOW	20 test USDC transfer at block 11,561,243	VERIFIED
BALANCE OBSERVER	20 test USDC at block 11,564,181	VERIFIED · STALE
Truth boundary	No price · no liquidity · no redemption claim · no causal performance claim	

The safety boundary is tested at every layer

Forgery→proof reject · stale→fail closed · replay→dedup · cross-tenant→RLS · AI→no signer

A three-minute walkthrough follows one continuous decision lineage

ACT I

ATTESTCOIN PROVES

Source event → stale proof rejected → fresh proof verified

ACT II

AI EXPLAINS

Evidence → RAG → eight roles → challenges → HOLD

ACT III

DAO DECIDES

Proposal → vote → Timelock → Guard → Outcome

REAL TX LINKS

CITED DECISION

HUMAN CONFIRMATION

Auditable AI governance for multi-chain treasuries

ATTESTCOIN

establishes what happened

AI COMMITTEE

explains what should happen

DAO

decides what may happen

AEOS turns verified cross-chain facts into cited institutional advice and governed outcomes—without giving AI asset authority.
